(a) RTL Module With Bugs

```
always @(*) begin

mux_in[0] = (~c & d) | (c & ~d);

mux_in[1] = 1'b0;

mux_in[2] = (~c & ~d) | (c & ~d);

mux_in[3] = (c & d);

end
```

(b) Debug Without Checkpoint

Log Without Checkpoint Output 'mux_in' has 11 mismatches. First mismatch occurred at time 50.

Wrong Debug Action

```
Replace

mux_in[2] = (~c & ~d) |

(c & ~d);

With

mux_in[2] = (~c & ~d) |

(c & ~d) | (c & d);
```

SIMULATION FAILED

Failure

(c) Debug With Checkpoint

Log With Checkpoint

First mismatch at time 50: Inputs: c=1, d=1 Got mux_in=1000 (8), Expected mux_in=1001 (9).

Reasoning

Let's analyze the mismatch for cd=11: mux_in[0] should be 1
Current output 1000, expected 1001
Problem with mux_in[0]:
mux_in[0] should be 1 for:

- cd=01: (~c & d) - cd=10: (c & ~d)
- cd=11: (c & d) <-- missing this term

Correct Debug Action

Replace
mux_in[0] = (~c & d) | (c & ~d);
With
mux_in[0] = (~c & d) | (c & ~d) | (c & d);

Update Checkpoint SIMULATION PASSED

Success
